

PRODUCTS	BASE	USE
AGUASTOP WA 9	Emulsion of water-proofing agents.	A water-based emulsion. Leather is resistant to water drops – both on crusts and ready articles. Recommended for clothing and nubuck. Leather becomes pleasant to the touch and is resistant to drops of water.
MODIFIKATOR DW 10	Emulsion of surface agents.	Agent effectively makes leather pleasant to the touch. Leather becomes soft, smooth, velvety, and warm.
MODIFIKATOR 202	Modified acrylic resins.	Used to make leather pleasant to the touch. Leather becomes warm, waxy and slightly oily.
PEN 5315	Mixture of solvents and surface active agents.	Penetrating agent used for dyed leather, tops and as a finishing agent.
PEN 5323	Mixture of penetrating agents.	A mixture of penetrating agents used to impregnate leather. Facilitates the penetration of resins.
PEN 7010	Mixture of various penetrating agents.	A universal penetrating agent used in dyeing sets to facilitate resin impregnation.
RETEN 100	Polyasirdine	Universal cross-linking agent, especially active with proteins, acrylic and polyurethane resins. When added to dyeing sets, boosts resistance to abrasions in both wet and dry conditions, as well as bending.
SOLVENT OIL J	Mixture of solvents.	Specially designed to help leather manufacturers clean roller-coaters of synthetic oils, waxes and paraffin, which are difficult to remove with the use of solvents or hot water.
